Employment History

My Verification Service

Software Engineer

<https://talentscreen.mvsi.com>

December 2018 ~ Present

- Used React.js, Node.js and MongoDB to build website
- Base on client requirements to developed and designed the sales form.
- Developed a multi languages system, support eight languages in website.
- Developed action center, it records all the user's history, such as create order, authorize order and delete files etc. It only allows the manager to view the history in website. It is useful to figure out the bugs in system
- Developed and designed the dashboard page, which helps our clients to easily review the new orders, delayed orders, weekly orders graph, and top partners monthly approved orders value graph.
- Developed a system to auto generate the MBF report for our client.
- Designed and developed a customizable email templates, it allows client to edit the context.
- Built an IT help desk support system, it allows verifiers team and clients to submit the enquire from the website and redirect the email to our support system.
- Built an excel exporter in website, which control the authorization of users who can download files and review details from orders and verification documents.
- Developed weekly report emailing system, which allows our clients to subscribe to the mailing list to review reports. From the report they can see the order details, customer info and current progress etc.
- Databases management duties.
- Lead the testing of newly released features and relevant debugging duties.
- Used BrowserStack to test the web application in different types of browser and mobile platform and fixed the layout issues.
- Client-side database support and version control.
- Helped new client to setup the website configuration, it allows them to access our demo website to play around.

Manukau Institute of Technology

Intern

April 2018 ~ September 2018

The aim of the project is to develop and design the Tic Tac Toe AI mobile app. The app is published on [Google Play Store](#) and [Apple Store](#). The source code can be found in [Github](#). Features includes:

- Supported multiplayer over network
